# Teaching Video Report

Helga Gaona 24 October 2026

## Topic and Video

I chose to study and teach about: **Shape Outside**. I have uploaded my video to **YouTube** and verified in a private browsing window that anyone with the link can view it without needing to request access or sign in.

You may view the video online at: https://youtu.be/YUfldK65mqE.

## Summary

My video covers the shape outside property in CSS that makes the text wrap around a shape instead of the element's invisible rectangular box. I explained that it only works on floated elements, and that float is still the right tool for this because wrapping text is a different job from page layout; I explained that grid and flexbox handle layout better.

I showed my live demo, and my html and CSS and showcased what happened when we remove float: the text won't wrap around the shape. I showed how clip-path controls the shape we see and shape-outside the shape were the text flows. I also explained that shape-margin adds breathing room along the curve of the shape. I showcased 3 different shapes: circle, diamond and a ellipse. I also showed that resizing the window squeezes the text into very narrow widths and I explained that we would need to turn off float to make it readable and to improve the user experience. I also shared that the rule for choosing a grid or flexbox is when we are placing things and float to wrap text with shape-outside. If I recorded it again, I would show image-based shapes with inset().
