Topic and Video

I chose to study and teach about: **Intrinsic sizing keywords**. I have uploaded my video to **YouTube** and verified in a private browsing window that anyone with the link can view it without needing to request access or sign in.

You may view the video online at: https://youtu.be/W1WZqwK7DPQ.

Summary

My video explains how the min-content, max-content and fit-content keywords allow to change the size of grid columns based on their content. I created a demo and showed how min-content creates the smalles practical column, how max-content keeps short text on one line all the time, and fit-content allows the content inside to grow until it reaches the specified limit. I also showerd the difference between using a fixed minimum and a content-based minimum like minmax(120px, 1fr) or 120px. Finally, I explained how I adjusted my portfolio using these keywords with labels inside my assignment cards. After recording, I realized I could've mentioned that when using very long content, there can still be overflow but I showcased overflow-wrap in my demo for min-content.
